FOREWORD

It is the objective of APPA, through the publication of this report, to promote comparisons of unit costs per gross square foot (GSF) of the various functions classified as maintenance and operations of plant, the number of full-time employees required to maintain and operate the plant, and the average wage and salaries paid these employees.

As in the past, the APPA Research and Survey Committee is undertaking this survey, which has been completed on a biennial basis for a number of years and provides the only comprehensive comparison of physical plant costs and staffing in higher education. Realizing that the comparison of costs and staffing in this manner is open to improvement, the committee is continuing to investigate new methods to further refine the data. As such refinements are developed they will be incorporated into future surveys.

The Research and Survey Committee believes that the data compiled in the 1980-81 edition of the Comparative Costs and Staffing Report is probably the most accurate that has been published to date. All questionnaires have been carefully screened. Data that appeared to be out-of-line or a misrepresentation was omitted from the tables. Many institutions reported Landscape and Grounds Maintenance in square feet of grounds. This survey is using building areas serviced (GSF) as the data base. In almost all cases the committee was able to insert the reported building area (GSF) instead of grounds area and adjust the cost data accordingly.

A total of 407 questionnaires were used in this report compared to 383 responses for the 1978-79 report and 353 responses for the 1976-77 report. The questionnaires were sent to 1900 institutions comprising the membership of APPA and the National Association of College and University Business Officers.

The committee and APPA do not guarantee the accuracy of the reported data or that all discrepancies between the reported and listed data have been eliminated. We have, however, attempted to make sure that the data listed in the report is as accurate as possible.

The committee is indebted to the staff of the Iowa State University physical plant and the APPA office without whose help the report would not have been possible.

We wish to express our appreciation to those institutions who participated in producing the information used in this report.

APPA Research and Survey Committee

L. Terry Suber, Chairman
Colorado State University

Victor E. Robeson
University of Arizona

William W. Whitman
Iowa State University

USE OF THE REPORT

Perhaps no other project of APPA is quite so sensitive or causes so much criticism. The comparative data can be very valuable to the membership. We all like to see how our operation compares with others. If it appears that our costs or staffing are high, or that another institution has a particularily efficient operation, we like to make inquiries for self-improvement. Sometimes we get beneficial suggestions and ideas. Often we find that the seeming greater efficiencies elsewhere are due to factors beyond our control: labor and utilities costs vary widely between areas; the efficiencies of power plants and utilities systems which we inherit vary, and improvements could cost millions; intricately landscaped grounds, constructed in the past, have very high maintenance costs. As professionals in facilities maintenance and management, we want to be able to make these comparisons and evaluate the contributing causes.

However, as funds for higher education become more and more limited and institutions search for ways to cut costs, the Comparative Costs and Staffing Report is more and more used by college and university administrators as a tool for evaluating the Physical Plant and cutting facilities budgets. Thus, instead of making constructive use of the new report every two years, many Directors now have to first analyze it with regard to "how does my department look" and "what will the Business Officer think and ask", and then start preparing their defense. But perhaps most importantly in anticipation of such use of the report by those over them, it is a very honest Director who will not try to find ways of making his operation "look good" in compiling the data for response to the Questionnaire. There are certainly enough variations in cost accounting systems, and required estimations, to do this to some degree. This detracts from the value of the resulting report.

We know that business officers and other college and university administrators are using the report to verify whether we have an efficient operation. Many of these administrators are aware of the shortcomings of using the report in this manner. Some administrators aren't. So, the more the report is used by administrators other than physical plant directors, the greater effort APPA members must make to ensure that true comparative data is assembled and published, and that data out-of-line because of special circumstances is explained.

This is, of course, not to suggest that comparative data should not be promulgated. Rather, it is to question whether it is being used as intended. If it is being used extensively by higher university officials and for more profound and far-reaching purposes than intended, perhaps we should take a new look at it and design a report to meet those new requirements. Especially, we should ensure that we are truly comparing apples to apples and oranges to oranges.

We want your comments and recommendations on the Comparative Costs and Staffing Report.

Rex O. Dillow
APPA Vice President for Professional Affairs

INSTITUTION IDENTIFICATION CODES

The identification code is made up of two parts: the state or province abbreviation, and a serial number unique to each institution within each state or province. The state or province abbreviation consists of two characters and the serial number may be up to three characters long. For example, the University of Iowa is identified by the code "IA1", and Iowa State University may have the code "IA2".

At the time data is entered for an institution, the identification number is automatically generated using the state or province name as the key. The serial number assigned to a particular institution reflects the order in which data was entered for that institution in relation to other respondents. It is used for internal purposes only during computer processing and as an index in locating information for that institution in printed listings. This number in no way reflects relative ranking, response time, or any comparative characteristic except as specifically discussed above.

TABLES 1 - 3

Unit Cost Summary

These tables list in various sequences and by several categories the data reported by responding institutions. Selected items appear in the same relative columnar location in tables that vary only by sequence as follows:

Table 1 - APPA Region (Total GSF Sequence)
Table 2 - Total GSF Sequence
Table 3 - Academic Program (Total GSF Sequence)

In all cases, data may be identified by reporting institution through the use of the institution identification code. Because of the number of items listed, each table is divided into two parts. Institutions appear in identical order in both parts with ID# repeated for easy reference.

Individual data items within the tables for which a blank is shown may be of two types: 1) no data was reported for that item by the responding institution, or 2) an actual zero value was reported. A review of survey questionnaires shows that the first situation is most common.

DEFINITION OF COLUMN HEADINGS

Abbreviation	Definition
ID#	The state/province/country abbreviation and serial number
P	Level of Academic Program: 2 - under four years 4 - four year (bachelors granting) 5 - five years (masters granting) U - five year - upper division only (masters granting) G - graduate (includes PhD. or equivalent granting) M - health sciences only
T	Type of Institution: 1 - non-public owned 2 - public owned
STD FTE	Student enrollment calculated in full-time equivalent students
TOTAL GSF	Total building area of all campus buildings
MATND GSF	Total building area of campus buildings maintained in Physical Plant budget
GRDS ACRE	Grounds area landscaped and maintained
BUILDING GSF	Building area serviced for the particular function

Abbreviation	Definition
$	Dollars of the country where the reporting institution is located
COST $/GSF	Cost per gross square foot of building area serviced for the particular function
EMP FTE	Full-time equivalent employees for the particular function.
M REPAIRS D MAINT FUNDING $	Funds made available for major repairs and deferred maintenance that were not in the regular maintenance and operation of plant budget
DEFERRED MAINT OUTSTANDING $	Estimated amount of deferred maintenance outstanding at the end of the fiscal year
RF%	Roof deferred maintenance
EW%	Exterior wall deferred maintenance
ME%	Mechanical and electrical systems deferred maintenance
US%	Utility systems deferred maintenance
OR%	Other deferred maintenance
PHY PLT FUNCTIONS	Functions which are the responsibility of the Physical Plant
MP	Campus motor pool
HS	Environmental Health & Safety
ML	Mail
PK	Parking
SC	Security
TL	Telecommunications
SA	Space allocation
PC	Programming of capital projects
SC	Supervision of capital construction

TABLES 4 - 6

Wage & Salary Summary

These tables list in various sequences and by several categories the data reported by responding institutions. Selected items appear in the same relative columnar location in tables that vary only by sequence as follows:

Table 4 - APPA Region (Total GSF Sequence)
Table 5 - Total GSF Sequence
Table 6 - Academic Program (Total GSF Sequence)

In all cases, data may be identified by reporting institution through the use of the institution identification code.

Individual data items within the tables for which a blank is shown may be of two types: 1) no data was reported for that item by the responding institution, or 2) an actual zero value was reported. A review of survey questionnaires shows that the first situation is most common.

SALARY CODES

Code	Annual Rate[1]
A	$7,000 & under
B	$7,001 to $8,000
C	$8,001 to $9,000
D	$9,001 to $10,000
E	$10,001 to $11,000
F	$11,001 to $12,000
G	$12,001 to $13,000
H	$13,001 to $14,000
I	$14,001 to $16,000
J	$16,001 to $18,000
K	$18,001 to $20,000
L	$20,001 to $24,000
M	$24,001 to $28,000
N	$28,001 to $32,000
O	$32,001 to $36,000
P	$36,001 to $40,000
Q	$40,001 to $44,000
R	$44,001 to $48,000
S	$48,001 to $52,000
T	$52,001 to $56,000
U	$56,001 to $60,000
V	Over $60,000

[1]Direct payroll cost - without retirement and similar fringe benefit costs in dollars of the country where the reporting institution is located.

Abbreviation	Definition
ID#	The state/province/country abbreviation and serial number
TOTAL GSF	Total building area
P	Level of academic program: 2 - under four years 4 - four year (bachelors granting) 5 - five years (masters granting) U - five year - upper division only (masters granting) G - graduate (includes PhD. or equivalent granting) M - health sciences only
CHIEF ADMIN	Chief Physical Plant Administrator
ASSOC ADMIN	Associate/Assistant Physical Plant Administrator
CHIEF ENG/ARC	Chief Engineer/Architect
HD/SUPT MAINT	Head/Superintendent of Maintenance
SUPV/FM SHOPS	Shop Supervisor/Foreman
ELECT	Electrician
P FIT PLUMB	Pipe Fitter/Plumber
CARPT	Carpenter
PAINT	Painter
GRNDS	Groundsman
LABOR	Laborer
CSTDN	Custodian
S	Salary code of highest paid employee in classification
FTE	Number of full-time equivalent employees in classification
U	Unionized

FIGURES 1 AND 2

Figures in the following sections illustrate "fitted" curves based upon the data submitted by the various institutions. These curves do not follow the raw data but are based on an equation derived from the data. The technique known as "family regression" is used.

The family regression technique fits simple nonlinear curves by transforming the X and Y data to fit the simple linear model $y = a + bx$. There are eight different curves or models that may be "fitted" to the data. These are:

1. $Y = A + BX$
2. $Y = A + B/X$
3. $1/Y = A + B/X$
4. $Y = A + BX^{.5}$
5. $Y = Ae^{BX}$
6. $Y = AX^{B}$
7. $Y = A + B\ln X$
8. $Y = A + BX + CX^{2}$

A plot of the fitted curve is made, based on the selected model. The regression coefficients, an F value of regression for the transformed data, the coefficient of determination of the transformed data, and the standard error of the estimate for the transformed data are all printed for each model fitted.

All common statistical information for a particular sample set also appears with the plot, including minimum and maximum observed values, arithmetic mean (average), standard deviation of both the X and Y parameters, and the sample size.

No attempt is made here to present conclusions or to pursue further data analysis. The best of eight models is included for each figure so that the reader may study the information presented and draw whatever conclusions may be appropriate to the situation. It should be noted, however, that not all models represent a good fit of the data.

The regression parameters shown for each fitted curve indicate various characteristics of the curve, the model equations used to generate the curve, and the parameters themselves in relation to the data being analyzed.

The following definitions may prove useful for further analysis:

Min (Minimum) - the lowest or smallest positive non-zero value observed within the sample set under consideration.

Max (Maximum) - the highest or largest positive non-zero value observed within the sample set under consideration.

Mean - the arithmetic average of the observed values in the value sample set.

Std Dev (Standard Deviation) - the square root of the variance of n observations x_1, x_2, $x_3 \ldots x_n$. The variance of n observations x_1, $x_2 \ldots x_n$ measures essentially the average of their squared deviations from their mean, x.

Regression coefficients A, B, (C) - the values that, when applied to the model or regression equation, express the hypothesized relationship between the independent variable X and the dependent variable Y.

R^2(Coefficient of determination or correlation coefficient) - a measure of the proportion of total variation about the mean (Y) explained by the regression equation; often expressed as a percentage. In other words, this number is an indication of how well the model explains the change in the value of the dependent variable for a given change in the value of the independent variable.

For example, if $R^2 = 0.25$ (25%), then it can be said that only one-fourth or 25% of the change in Y is explained or is dependent upon a change in X. Obviously then, the closer the value of R^2 to 1.00, the better the model fits the data.

S(Y/X) (Standard error of the estimate) - a measure of the error with which any observed value of Y could be predicted from a given value of X using the determined model equation.

The smaller the value of the standard error, the better; hence, the more precise will be the predictions.

F (Significance of regression) - a measure of the level of confidence that may be placed on the model as a predictor of variable response. In other words, the proportion of the variation observed in the data that is accounted for by the model equation.

The F-value is an expression of the degree of significance of the relation between X and Y. A high value of F does not necessarily mean that the equation is useful for predictive purposes but only that there is a relationship between the two variables.

Unless the range of values predicted by the fitted equation is considerably greater than the size of the random error, prediction will often be of no value even though a "significant" F-value has been obtained because the equation will be "fitted to the errors" only.

One suggestion is that in order for an equation to be regarded as a satisfactory predictor, provided other indicators are within acceptable limits, the value of the F-statistic should exceed ten (10).

Z stat (Correlation coefficient test of significance) - a measure of the significance or adequacy of the correlation coefficient (R^2) for the observed sample size.

In nearly all cases, the sample size is greater than 100. For such large samples, a Z statistic of greater than 2.58 indicates a significant value of R^2.

SECTION FOUR: MISCELLANEOUS DATA

Which of the following functions are the responsibility of your Physical Plant? (Check all that are applicable):

Campus Motor Pool . . . . . ____ 35

Environmental Health and Safety . . . . . ____ 36

Mail. . . . . ____ 37

Parking . . . . . ____ 38

Security . . . . . ____ 39

Telecommunications . . . . . ____ 40

Space Allocation . . . . . ____ 41

Programming of Capital Projects . . . . . ____ 42

Supervision of Capital Construction . . . . . ____ 43

Deferred Maintenance is defined as maintenance projects that were not included in the maintenance process because of perceived lower priority status within available funding and consists of two categories of unfunded maintenance: (1) the lack of which does not cause the facility to further deteriorate and, (2) the lack of which does result in progressive deterioration of the facility for the current function.

If you have a program of facilities evaluation for the purpose of identifying deferred maintenance, please complete the following questions:

Estimated amount of deferred maintenance outstanding at the end of your fiscal year . . . . . $ _____ 44

Breakdown of the above estimated amount is as follows:

Roofs (%) . . . . . ____ % 45

Exterior Walls (%). . . . . ____ % 46

Building Mechanical and Electrical Systems (%) . . . . . ____ % 47

Utility Production and Distribution Systems (%) . . . . . ____ % 48

Other (%) . . . . . ____ % 49

Lines 45 through 49 should total 100.

Return this and all other questionnaire pages to:
APPA, 11 Dupont Circle, Suite 250, Washington, D.C. 20036
By November 1, 1981

Appendix B

A Classification of Accounts for Physical Plant

In 1965 the Association of Physical Plant Administrators of Universities and Colleges (APPA) recommended a classification of accounts designed to serve as a general model for physical plant accounting and to provide a standard base for the development of comparative data. Adjustments have been made in the classification since that time, but the general format has received considerable acceptance. It is used by APPA as a base for its studies of (1) comparative unit costs and wage rates for physical plant maintenance and (2) comparative staffing and operations for physical plant functions.

Major Accounts

1. Physical Plant Administration
2. Building and Equipment Maintenance
3. Custodial Services
4. Utilities
5. Landscape and Grounds Maintenance
6. Major Repairs and Renovations

Outline of Costs to Be Included Under Each Major Account

1. Physical Plant Administration

All activities necessary to carry out the duties of management and administration for all areas under the jurisdiction of the physical plant division are included. Examples of the activities are:

1.1 Administration

Salaries, wages, employee benefits, travel, equipment, and other operating costs required for:

Administrator

Assistant Administrators

Office personnel, including those assigned to payroll, billing, materials ordering, personnel records, and dispatching of work orders for the physical plant division

Other administrative operating costs including supplies, materials, pro rata share of telephones, postage, computer rental, accounting costs, and career training programs.

1.2 Engineering

Salaries, wages, employee benefits, travel, equipment, and other costs required to provide technical and engineering services necessary to effectively carry out functions *assigned* and *funded* in the physical plant division. Includes staff personnel such as engineers, architects, draftsmen, estimators, schedulers; preparation of documents for contractual maintenance and renovations; analysis of systems and modes of operation, plant records, etc. Preparation of architectural and engineering plans and specifications for alterations and new construction normally are funded from other sources.

2. Building and Equipment Maintenance

Building maintenance includes all items related to routine repair of buildings, structures, and appurtenances, including normally recurring repairs and preventive maintenance. The following are included:

2.1 Interior and exterior of buildings

2.1.1 Plumbing, heating, air conditioning, and ventilation

2.1.2 Electrical repairs of all types including primary and secondary systems, certain lamp replacements (requiring special ladders and rigging), and maintenance of outdoor lighting fixtures (excluding energy costs)

2.1.3 Carpentry and cabinetmaking

2.1.4 Painting and glazing

2.1.5 Hardware, locks, keys, closers, and records for same

2.1.6 Roofing and sheet metal work, including downspouts and gutters

2.1.7 Welding and necessary machine work

2.1.8 Elevators and similar equipment

2.1.9 Miscellaneous building repairs such as tuckpointing

2.2 General-purpose classroom furniture and equipment within buildings, but not inventoried to a department

2.3 Utility distribution systems inside buildings—electrical, heating, process steam, water lines, gas lines, and sewer lines (storm and sanitary)

2.4 Operating and replacement costs of all equipment, materials, and tools used in building maintenance, excluding hand tools furnished by employees

Building maintenance also may provide services on a reimbursable basis to other accounts. Examples of these are auxiliary enterprises, alterations and improvements, new construction, experimental and special teaching support facilities, and departmental inventoried equipment.

3. Custodial Services

All costs related to custodial services in building interiors are included, except those for auxiliary enterprises and hospitals.

3.1 Salaries, wages, and employee benefits of custodians; supervision; and services required for cleaning building interiors

3.2 Small setups only where materials for special setups are stored or kept within the same building

3.3 Snow removal on building steps plus five feet (or similar predetermined length) of sidewalk in each direction

3.4 Other operating costs such as paper, paper towels and tissue, wax, erasers, chalk, cleaners, and other materials and supplies

3.5 Operating and replacement costs of all equipment used in connection with custodial services and lamp replacement where lamps are readily accessible without special ladders and rigging

3.6 Elevator operation on nonautomatic equipment

Common operations include mopping, sweeping, and waxing floors (sanding and refinishing floors are excluded); dusting, polishing furniture and fixtures such as venetian blinds, partitions, pictures, maps, and radiators; cleaning chalkboards, chalk trays, erasers, and replacing chalk; washing and dusting walls; cleaning and disinfecting commodes and urinals; cleaning and washing other fixtures, walls, and partitions, and replenishing supplies for restrooms; emptying and cleaning waste receptacles; dusting and cleaning windows and other glass surfaces; sweeping and cleaning entrances; and opening and/or closing building doors and windows.

Generally, services requiring technical direction at the time of performance, such as cleaning chemistry laboratory bench tops, decontaminating radioactive facilities, or cleaning extremely delicate apparatus, are not classified as custodial, but usually are provided by the department having specific jurisdiction.

4. Utilities

All energy costs for heating, cooling, light and power, gas, water, and other utilities necessary for physical plant operation are included. These normally are:

4.1 Payroll costs of all supervisory and operating personnel in connection with utilities

4.2 Operation and maintenance of heating and power plant equipment including water plant and sewage disposal plants

4.3 Operation and maintenance of equipment in central air conditioning plant

4.4 Contractual costs for purchase of electricity, water, and sewage treatment

4.5 Operation and replacement costs of all equipment used in connection with production of utilities

4.6 Maintenance of utility tunnels, outdoor distribution systems for electricity, gas, steam, compressed air, chilled water, high-temperature water, domestic water, and sanitary and storm drains. This expense *does not* include open-ditch drainage.

5. Landscape and Grounds Maintenance

Grounds maintenance includes operation and maintenance of campus landscape and grounds. Excluded are areas not intensively maintained by the physical plant budget and/or other areas for which the physical plant division is reimbursed.

5.1 Salaries, wages, and employee benefits of all supervisory and operating personnel in connection with grounds

5.2 Maintenance of all areas of the main campus; growing things such as trees, grass, shrubs, and flowers; nursery stock including seeds, fertilizers, and plant materials

5.3 Maintenance of roads and walks, parking areas, irrigation systems, signs, and other landscape features

5.4 Snow removal

5.5 Maintenance of golf course, athletic practice fields, and stadium and varsity fields unless operated as auxiliary enterprises

5.6 Maintenance of physical education, intramural, and ROTC drill fields

5.7 Maintenance of open-ditch drainage, fences, retaining walls, and riprap

5.8 Care of miscellaneous fixed equipment such as benches and shelter houses

5.9 Operation and replacement costs of all equipment used in connection with grounds maintenance

6. Major Repairs and Renovations (Special Line Items)

All costs for major nonrecurring repairs and major deferred maintenance items are included. Major projects are those costing in excess of $10,000 or similar amount as determined by the institution.

6.1 Cost of salaries of supervisory and operating personnel connected with major repair and renovation projects

6.2 Line item special allotments and essentially large improvement items

6.3 Replacement costs of all equipment used in connection with major repairs and renovations

6.4 Costs related to planning, design, or administration of major repairs and renovations

7. Other Services

Other essential services not consistently within the physical plant division, yet frequently assigned, are:

Automotive repair
Bus systems
Construction planning and inspection
Communications (telephone and telegraph)
Fire protection
Mail and messenger service
Property insurance
Purchasing and stores
Safety
Security
Solid waste disposal
Traffic
Trucking and moving

DEFINITIVE TERMS

1. Gross Area

The area reported is the total area maintained by the division and for which the division has a budget. Any area for which the division is reimbursed should not be included. Areas and costs should be included only if the physical plant division is responsible for them.

Gross area is determined in accordance with the following guidelines from Publication 1235 of the National Academy of Sciences, National Research Council ("Classification of Building Areas," Federal Construction Council Technical Report No. 50). In the event gross area already is calculated on some other basis, report it as such, but indicate by footnote the basis or reference for calculation.

1.1 Definition

"Gross area" is construed to mean the sum of floor areas included within the outside faces of exterior walls for all stories, or areas, having floor surfaces.

1.2 Basis for Measurement

Gross area should be computed by measuring from the outside face of exterior walls, disregarding such extensions as cornices, pilasters, and buttresses.

1.3 Description

In addition to ground-to-top-story internal floored spaces covered in 1.1 above, gross area should include basements (except unexcavated portions), attics, garages, enclosed porches, penthouses and mechanical equipment floors, lobbies, mezzanines, functional balconies—inside or outside—and corridors, provided they are within the outside face lines of the building. Roofed loading or shipping platforms should be included whether within or outside the exterior face lines of the building.

1.4 Limitations

Open courts and light wells, or portions of upper floors eliminated by rooms or lobbies rising above single-floor ceiling height, should not be included in the gross area, nor should unenclosed roofed-over areas or floored surfaces with less than six feet, six inches clear head room be included unless they can be designated and used as either net assignable, mechanical, circulation, or custodial areas.

1.5 Part-Year Occupancy

When new buildings become operative during a year or if an existing building is in service for only part of a year, the area reported is the gross area multiplied by the fraction of the year the building was in service.

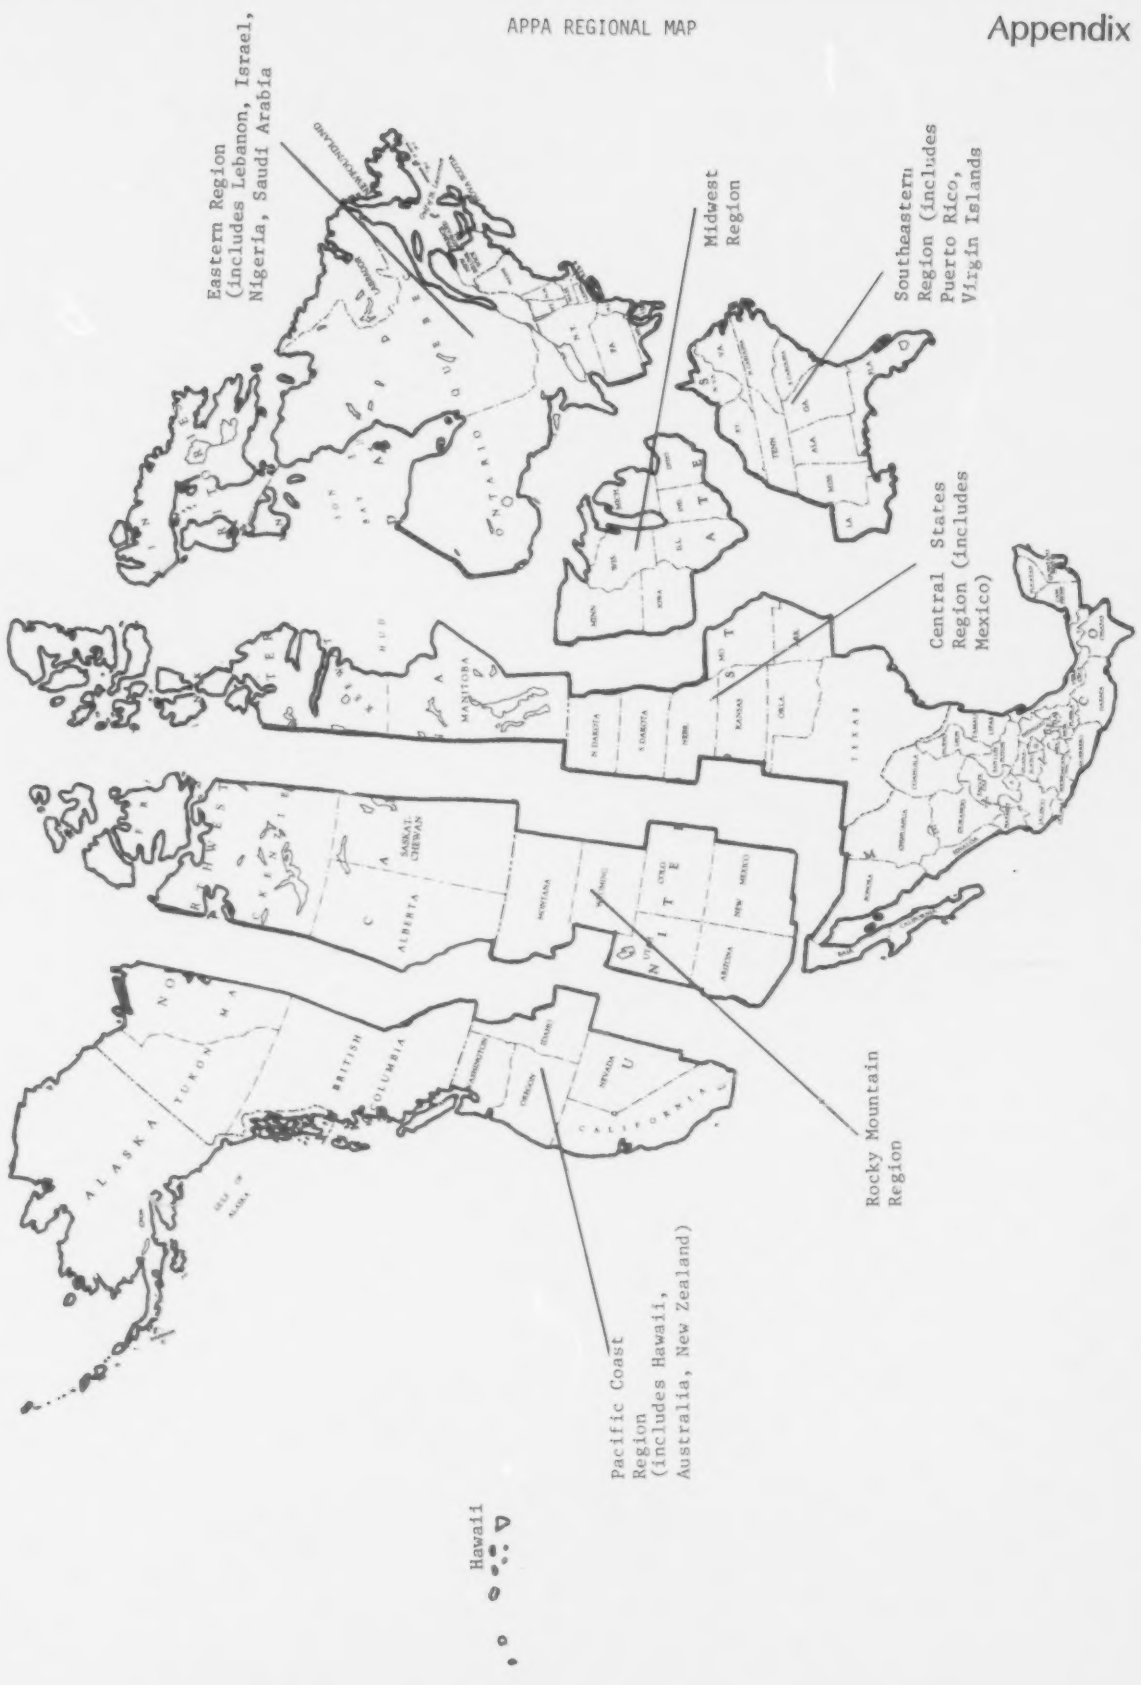
Example: The fiscal year ends June 30. A new building of 100,000 gross square feet is accepted for beneficial occupancy April 1. The area reported is 3/12 x 100,000 square feet, or 25,000 square feet for the year of first occupancy. The following year the area reported is 100,000 square feet.

2. Student Enrollment

Fall enrollment data should be reported consistently from one year to another. If a change in reporting procedure or in calculation of full-time equivalent students is made, such change should be clearly documented to eliminate any misunderstanding or confusion by users of the data.

APPA REGIONAL MAP

Appendix C



APPA Publications

1978-79 Comparative Costs and Staffing Report for Physical Plants of Colleges and Universities is a compilation of data on unit costs, wages, and salaries broken down by geographic region, enrollment, and academic program. *$25*

Formula Budgeting: An Approach to Facilities Funding, by David L. McClintock, reviews formula budgeting practices used at various times by six states to allocate funds for support of state colleges and universities. *$6*

Campus Planning and Construction details a multiphase concept in planning, constructing, and renovating facilities. This concept examines each project from its initial design, through construction, to maintenance consideration after the structure is completed. The author offers numerous alternatives to each suggestion he makes, depending upon possible variables at different institutions. *$15*

Mortgaging the Future: The Cost of Deferring Maintenance examines the causes of the deferred maintenance problem. The author, Dr. Harvey H. Kaiser of Syracuse University, covers the financial aspects and organizational structure of deferred maintenance as well as suggesting methods of evaluating and addressing the problem. *$6*

Comprehensive Maintenance and Repair Program: Guidelines and Standards for the Maintenance and Repair of State Owned Facilities provides standards that can be modified and adapted to fit your institution's needs. It includes information on budgets, policies and procedures, staffing patterns, and custodial management. *$7.50*

Proceedings of APPA's 67th Annual Meeting (1980), Toronto, Canada. "The Eighties—Time for Conservation" was the theme for the program. Publication includes papers on topics such as energy management, cost control, resource conservation, and alterations and renovations. *$10*

Proceedings of APPA's 66th Annual Meeting (1979), Seattle, Washington. "Knowledge for the 80s" was the theme for the program. Publication includes papers on topics such as campus security, preventive maintenance, energy savings, and computerized telephone control systems. *$7.50*

A Basic Manual for Physical Plant Administration, by George O. Weber, is an instructional and operational manual for facilities administration. *$15.50*

Remodeling, Renovation and Conversion of Educational Facilities is a compilation of papers by noted physical plant administrators on the when and how of facility renovation, restoration, and conversion. *$7.50*

Housekeeping Procedure Manual, prepared by the Department of Building Services at Purdue University, contains a complete housekeeping program for building custodians. Includes instructions for operating automatic floor scrubbers, floor machines, and many other helpful maintenance suggestions. *$5*

APPA Newsletter, a fast-paced monthly communication of newsworthy people, places, and events emphasizing what's happening now in physical plant departments, federal agencies, and in higher education association circles. Includes news of APPA projects and activities, physical plant news, Energy Task Force project news, new members, and an Information Exchange column. *The subscription price is included in APPA dues; others may subscribe for $30 a year.*

Accessibility Publications

Modifying the Existing Campus Building for Accessibility: Construction Guidelines and Specifications will include detailed design drawings for accessibility modifications to existing buildings for use by architects and contractors. $7.00

Accessible Products Catalog will review currently available construction products designed for accessibility, using the latest standards and criteria. Listings will include manufacturers' name and product descriptions. Free as long as they last.

Adapting Historic Campus Structures for Accessibility highlights solutions to problems involved in modifying older buildings for use by handicapped persons. $5.50

Creating an Accessible Campus is a comprehensive guide to accessibility for handicapped persons, including Section 504 regulations, general design recommendations, science laboratory design, instructional aids, and sources of funding. *$12.50*

Steps Toward Campus Accessibility features photo-essays on progress campuses have made in overcoming architectural, attitudinal, and communications barriers to handicapped persons. *$5.50*

Energy Task Force Publications

Energy Cost and Consumption Audit Report 1976-1979 contains energy consumption data resulting from a survey of 500 colleges and universities broken down by campus and type of facilities. It includes variables for size and type of facilities, fuel, and number of heating and cooling degree days. *$20*

Controlling Energy Through Microprocessor Utilization is based on the workbook used for an Energy Task Force seminar series. The publication provides information on establishing a microprocessor-based energy management system including goals and objectives, system design, types of control systems, sources and costs, purchasing procedures, and selling the program. *$15*

Cogeneration: A Campus Option? by Robert and Wendy Goble, describes the steps involved in implementing a campus cogeneration facility. Includes descriptions of campuses that are cogenerating as well as available technology and EPA regulations. A must for the campus considering cogeneration. *$12.50*

Energy Conservation Checklist for Universities and Colleges lists suggestions for conservation programs, primarily taken from existing programs of about 35 institutions. *$3*

Energy Management for Colleges and Universities is a 140-page manual based

on information developed for an Energy Task Force workshop series to help financial and physical plant personnel implement a well conceived energy management program. This is an essential tool for ensuring that colleges and universities continue to meet the instructional, research, and public service needs they have served. *$20*

Campus Energy Management Projects contains case studies of energy management projects implemented by colleges and universities involving the building envelope, electrical systems, HVAC systems, building operations, utilities production and operation. *$7.50*
